Samuel Cameron Lowe

sam@samlowe.dev | linkedin.com/in/samclowe | github.com/samlowe106 | samlowe.dev/portfolio

Education

Northeastern University – College of Science Boston, MA
Master of Science in Applied Mathematics, Data Science Concentration *May 2025*

- **Relevant Coursework:** Algorithms, Machine Learning & Statistical Learning Theory 1 & 2, Probability 1 & 2, Measure Theory, Abstract Algebra 1 & 2
- **GPA:** 3.92/4.0

Northeastern University – Khoury College of Computer Sciences Boston, MA
Bachelor of Science in Computer Science and Mathematics *June 2023*

- **Relevant Coursework:** Software Development, Object-Oriented Design, Linear Algebra, Partial Differential Equations, Computer Systems, Computer Graphics, Complex Analysis
- **Activities & Societies:** Math Club (President), MathEMA (eBoard), Game Dev Club, NUPride

Technical Skills

Languages: Python, C#, Java, C/C++, TypeScript, Go, SQL, Rust
Technologies and Skills: Django, NumPy, Pandas, GeoPandas, Scikit-Learn, Keras, TensorFlow, Git, FastAPI, Docker, Kubernetes, Linux, Windows, Jupyter, LaTeX, Vue.js, React.js, Machine Learning, Data Science, Data Engineering, Data Cleaning, GIS Analysis, A/B Testing, Tableau, Queueing Theory, Object-Oriented Programming, Functional Programming, Event-Based Programming, Async Programming

Experience

Data Analyst Boston, MA
Center for Strategic Politics *Dec. 2024 – Current*

- Used Python data analysis and visualization libraries to analyze poll data for both public press releases and several polls that have been commissioned by campaigns around the country
- Designed the weighted single transferrable vote algorithm to simulate the outcomes for the NYC Mayoral Democratic Primary Poll, which was featured on the New York Times

Software Engineering Co-op Boston, MA
BitSight Technologies *Jan. 2022 – Aug. 2022*

- Designed and prototyped Golang microservice to parallelize data processing
- Worked with SQL, Python, and Kubernetes to add features and unit tests to back-end Django database

Back-End Engineer Boston, MA
Generate Product Development *Jan. 2021 – May 2021*

- Worked with a team of two other back-end engineers to integrate Google Maps, RapidSOS, Bluetooth, and MySQL into our Django back-end
- Led several weekly standups to discuss team progress, priorities, and resolve issues

Projects | samlowe.dev/portfolio

League of Losers | Python, Jupyter, NumPy, TensorFlow, scikit-learn, Matplotlib | Writeup, Repository

- Explored a data set of team winrates in League of Legends based on game scoreboard at 10 minutes
- Trained logistic regression, random forest, artificial neural network, linear and quadratic discriminant analysis, k-nearest neighbors, and other classifiers to predict outcomes with over 70% accuracy
- Compiled an extensive writeup detailing data cleaning, dimensionality reduction using singular value decomposition, and contrasted the performance of various models

PaperScraper | Python, PyTest, Poetry, uv, APIs (Reddit, Imgur, Flickr), Git | Writeup, Repository

- Developed a command-line program to allow users to easily download wallpapers from Reddit
- Used asynchronous programming to improve performance when downloading multiple files
- Wrote automated unit tests with PyTest, MagicMocks, VCR.py, GitHub actions

nprcore.me | Vue.js, JavaScript, Spotify API, Git | Repository

- Pair-programmed a website to analyze users' music choices and compare them with NPR's recommended songs
- Designed an algorithm to calculate a user score, compare it against population data, and rate users' music tastes
- Recognized by official NPR Twitter accounts including All Things Considered and NPR Interns
